VAMA | Single Window System

Sea, Land, Air
Are controlled

Product Overview

International trade is a fundamental aspect of the economy that plays a crucial role in improving the well-being of individuals and the progress of countries. It allows nations to expand their markets, access goods and services not available domestically, and increase market competition, resulting in lower prices for consumers. Information technology is essential in monitoring and controlling systems in international trade, providing a solid infrastructure and tools to effectively manage the process. Tahaluf has developed a comprehensive solution, VAMA, which simplifies the process of importing and exporting goods across borders. VAMA allows businesses and individuals to submit required documentation, pay fees, and track shipments electronically. It streamlines the customs process, reducing paperwork and bureaucracy, allowing businesses to focus on their core operations. Overall, VAMA is a valuable resource for businesses looking to efficiently manage international trade.

Vision & Mission

Vision

Our vision is to be the global leader in customs management technology, delivering cutting-edge solutions that drive efficiency and compliance for businesses and government agencies.

VAMA

Technologies Used

VAMA Platform is distinguished from any other Customs Clearance solution by the dynamic and flexible workflow that empowers users. It is a user-centric solution with several modules and products that provides flexibility in addressing the business needs of any customs authority or other customs agency. Users don't have to follow an A-to-Z list of procedures to run the system, as Vama Platform allows users to build their own harmonized system structure, workflows and processes according to what fits with their specific requirements, internal rules, and country legislation. With that in mind, all requested tasks can be executed via Vama Platforms modules in accordance with the legal systems the users build their processes upon and integrate the systems with. Considerations To Keep in Mind When Working With Vama Platform:

For frontend applications

For backend applications

For the Message Broker

For the Supported Providers

Competitive Advantage

How It Works

01 Advanced technology

The platform uses advanced technology such as Artificial Intelligence and Machine Learning to automate and streamline the customs clearance process, making it more efficient and accurate.
